

# **Semester I**

Course Title: **Mathematics I**

L-T-P-C

Course Code: **MA11101**

3-1-0-4

Pre-requisite:

**Trigonometric formulae, concepts of lines, planes and spheres, integration and differentiation.**

### **Course Objective**

Fundamental notions of solutions of the system of equations, vector spaces and linear transformation on these spaces have to be studied. Concept of ordinary and partial differential equations and their solutions with applications will be discussed. Students will learn numerical differential and numerical integration techniques, numerical methods for finding the roots of a given equation will also be studied.

### **Course Content**

#### **MODULE I (9Hours) Linear algebra**

Algebra of Matrices, rank and inverse of a matrix, solution of algebraic equations-consistency, Hermitian, skew Hermitian and unitary matrices, eigenvalues and eigenvectors. Vector space-linear dependence of vectors, basis, dimension, linear transformations.

#### **MODULE II (11 Hours) Numerical Analysis**

Numerical Analysis: finite difference, Newton's forward and backward interpolation formulae, Lagrange's interpolation formula, Numerical differentiation, Numerical integration: Trapezoidal rule and Simpsons 1/3<sup>rd</sup> rules, Numerical differentiation, Solution of polynomial and transcendental equation- bisection, Newton-Raphson and Regula-falsi methods, Differential equations: Taylor's series method, Euler's and modified Euler's method, Runge-Kutta method,

#### **MODULE III (10 Hours) Differential equations**

Introduction, formation of differential equation from a given n-parameters family of curve; solution using separation of variables, solution of homogeneous equation, First order differential equation-exact, integrating factor, linear and Bernoulli's equations, higher order differential equation with constant coefficients, Beam problem.

#### **MODULE IV (10 Hours) Partial Differential Equation**

Partial differential equation: formulation and classification; linear partial differential equation of the first order (Lagrange's method), Non-linear PDE of the first order (Charpit's method), Method of separation of variable for solving first order PDE, Heat equation wave equation and Laplace equation, classification of second order linear partial differential equations as hyperbolic, parabolic, elliptic.

5. K. Hoffman & R Kunze, Linear Algebra, 2<sup>th</sup> edn. Pearson Education India, 2003.
6. Numerical Methods By M. K. Jain, S. R. K. Iyengar & R. K. Jain
7. S.S Sastry, Introductory methods of Numerical analysis, Fifth edition, PHI Learning Pvt Ltd, 2012.
8. M.D Rai Singhanian, Ordinary & Partial Differential Equations, 18<sup>th</sup> edition, S. Chand & Company Ltd.
9. Hoffman K & Kunze R, Linear Algebra, Prentice Hall of India, New Delhi (1971).
10. S.J. Farlow, Partial Differential Equations for Scientists and Engineers, Dover Publications, 1993.
11. Erwin Kreyszig, Advanced Engineering Mathematics, 9<sup>th</sup> edn., Wiley India, 2009.

Course Title: **Engineering Chemistry**  
Code: **CY11101/12101**  
Pre-requisite: **NIL**

**L-T-P-C**  
**3-0-0-3**

### **Course Objective**

To introduce students to Conventional and non-conventional Energy sources, Electrochemistry and Engineering materials

### **Course Content**

#### **MODULE I: ENERGY & FUELS (14 hours)**

Sources of Energy, Fuels- classification, examples, relative merits, types of coal, determination of calorific value of solid fuels, Bomb calorimeter, theoretical oxygen requirement for combustion, proximate & ultimate analysis of coal, manufacture of metallurgical coke, flue gas analysis, problems. Lubricants - Definition, theories of lubrication, characteristics of lubricants, viscosity, viscosity index, oiliness, pour point, cloud point, flash point, fire point, additives to lubricants, Solid lubricants. Renewable sources of Energy (Solar Energy): Photovoltaic Cells and how it converts Light into Electricity.

#### **MODULE 2: ELECTROCHEMISTRY & CORROSION (8 hours)**

Basic idea about Electrode Potentials and Cells, Galvanic vs. Electrolytic Cell, Nernst Equation, Battery, Fuel Cells. Corrosion- types, Electrochemical theory, Different forms of wet corrosion, Galvanic (or Corrosion) series, Corrosion control, Techniques of metal Coating (Organic, Inorganic), Cathodic protection, Corrosion inhibitors.

#### **MODULE 3: SOLID STATE (12 hours)**

The solid state, Structures of Simple ionic compounds, Close packing in solids, bcc, fcc, structures of rock salt - caesium chloride- spinel - normal and inverse Spinels, Stoichiometric Defect, controlled valency & Chalcogen semiconductors, Non - elemental semiconducting Materials, Preparation of Semiconductors-steps followed during the preparation of highly pure materials and further treatments. Semiconductor Devices-p-n junction diode. Steel and important alloys.

#### **MODULE 4: NANOSCIENCE & TECHNOLOGY (8 hours)**

Introduction, scope of Nanoscience & Technology, Types of nanomaterials, Categories of nanomaterials, Nanotechnology, Quantum dots, Organic nanoparticles, Inorganic-organic Hybrid nanoparticles, Nano-intermediates, Nanocomposite materials.

**OUTCOME: Students would become familiar with the important practical applications of fuels, electrochemistry, and nanotechnology.**

### **Text Books/ Reference Books**

- 1) Engineering Chemistry, P.C. Jain, M. Jain, Dhanpat Rai Publishing Company, NewDelhi, 2005.
  - 2) Wiley Engineering Chemistry, 2<sup>nd</sup> Edition, Wiley (India)
  - 3) R1: A Textbook of Engineering Chemistry, Shashi Chawla, 3rd Edition, DhanpatRai & Co,New Delhi, 2007
  - 4) R2: Engineering Chemistry, 2<sup>nd</sup> Edition, O.G. Palanna, McGraw Hill Education (India) Pvt. Ltd., Chennai, 2017
- R3: Engineering Chemistry, B.K. Sharma, Krishna Prakashan Media (P) Ltd

**Course Title: Health, Safety and Environment**  
**Course Code: CY11102 / CY12102**  
**Pre-requisite: Nil**

**L-T-P-C**  
**2-0-0-2**

### **Course Objective**

To help realize the importance of and their role in the protection and maintenance of a healthy environment for sustainable development. To enable students to grasp the significance and issues related to ecosystems, biodiversity, and natural resources, as well as ways of managing/ protecting them. To make students aware of environmental policies and movements and the role of individuals and communities in environmental protection for the purpose of educating and inspiring young minds.

### **Course Content**

**MODULE I (8 Hours):** Renewable and non-renewable resources, Role of an individual in conservation of natural resources, equitable use of resources for sustainable lifestyles. Concept of an ecosystem, Structure and functions of an ecosystem. Biodiversity Definition, Genetic, species and ecosystem diversity. Conservation: general information, types and importance. Biogeochemical cycles: Carbon, Nitrogen, Sulfur etc.

**MODULE II (8 Hours):** Environmental pollution Definition, causes, effects and control measures, Types of pollution:(general) for water, soil, marine, noise, nuclear and thermal pollution. Air pollution and control sources, pollutants and their health effects. Solid waste management Generation, on site handling and storage, transfer and transport. Role of an individual in prevention of pollution. Case studies. Legislation in India Conservation Act, Other acts, Issues involved in enforcement of environmental legislation, public awareness.

**MODULE III (7 Hours):** Human population and the environment Population growth and characteristics, commonly occurred diseases (air borne, water borne etc.), Environment and human health, water conservation, rain water harvesting etc. Millets- Types, advances in millet research as a sustainable food source.

**MODULE IV (5 Hours):** Basic objective of Disaster and safety management, floods, earthquakes, cyclone and landslides: Causes, Effects and Management.

### **Text/Reference Books**

- 1) **Bharucha, E.**, Textbook of Environmental Studies, University Press, 2<sup>nd</sup> Edition, 2018.
- 2) **Basu, M. and Xavier, S.**, Fundamentals of Environmental studies, Cambridge University Press, 2015.

**Course Title: Computer Programming and Problem Solving**  
**Course Code: CS11101**  
**Pre-requisite: Nil**

**L-T-P-C**  
**3-0-0-3**

### **Course Content**

**MODULE 1[3L]:** Problem Solving Skills, Identify the Problem, Analyze the problem, Identify Decision Criteria, Develop Multiple Solutions, Choose the Optimal Solution, Problem Implementing Solutions.

**MODULE 2[3L]:** Overview of C language, Basic Structure of C program, Constants, Variables and Data Types, User-defined Data Types, Operators and Expressions, Precedence and Associativity.

**MODULE 3[10L]:** Input-Output Operations, Decision Making, Branching and Looping Statements, Arrays, Character Arrays and Strings.

**MODULE 4[12L]:** User-defined Functions, Structures, Unions, Debugging Strategies.

**MODULE 5[12L]:** Pointers, Dynamic Memory Allocations, File Management, Introduction to Preprocessor Commands and Macro Processing, argv, argc.

### **Text /Reference Books**

- 1) C Programming by Deital and Deital.
- 2) Programming in ANSI C, E. Balaguruswamy, 5th Edition McGraw Hill.
- 3) The C Programming Language, Brian W. Kernighan, Dennis M. Ritchie, Prentice Hall.
- 4) Programming With C, Byron Gottfried, McGraw Hill.

Course Title: **English Language and Literature**

L-T-P-C

Course Code: **HS11101**

**2-1-0-3**

Pre-requisite: **Nil**

### **Course Objective**

The key objective is to develop in the under-graduate students of engineering a level of aptitude in English language learning incorporated through literature studies that will help them acquire the independent and effective communication skill required for academic and social needs.

### **Course Content**

#### **MODULE I (12 Hours) Basics of English Grammar**

Synonyms, Antonyms, One word substitution, Idioms and Phrases, Article and Preposition, Subject Verb Agreement.

#### **MODULE II (07 Hours) Language through Literature**

**Essays: 1. *A Wedding in Russia* by Sudha Murthy, 2. *English in India* by R. K.**

**Narayan Poems: 2. *Where the Mind is Without Fear* by Rabindranath Tagore 3. *If* by Rudyard Kipling**

#### **MODULE III (08 Hours) Writing for practical purposes**

Letter Writing, Paragraph Writing, Essay Writing, Film and Poetry Appreciation.

#### **MODULE IV (Non-Detail Study:)**

Short Stories: **O'Henry** The Last Leaf **OR** The Gift of Magi **OR**

**Ernest Hemmingway** The Old Man and the Sea

**OR**

**R.K. Narayan** An Astrologer's Day **OR**

**Edgar Allan Poe** The Black Cat **OR**

**Charlotte Perkins Gilman** The Yellow Wallpaper

#### **MODULE V (06 Hours)**

**Precis/Summary Writing and Vocabulary Building** (through prescribed non-detail texts)

### **Text/ Reference Books**

1. **Swan, Michael.** Practical English Usages. Oxford University Press.
2. **Wood, F.T.** A Remedial English Grammar for Foreign Students. Macmillan.
3. **Pleasures of Reading: An Anthology of Poems,** Orient Longman.
4. **Selected Essays and Short Stories,** Oxford University Press.
5. **Selected Poems,** Oxford University Press.

**Course Title: Computer Programming Laboratory**

**L-T-P-C**

**Course Code: CS11201**

**0-0-4-2**

**Pre-requisite: Nil**

### **Course Content**

- Input and Output programs
- Control Loop programs
- Conditional Execution programs
- Structure and Nesting programs
- Functions and Prototype programs
- Array programs
- Pointer programs

### **Text /Reference Books**

- 1) C Programming by Deital and Deital.
- 2) Schaum's Outline of Programming with C by Byron Gottfried
- 3) Programming in ANSI C by E. Balagurusamy

Course Title: **Engineering Chemistry Laboratory**  
Code: **CY11201/12201**  
Pre-requisite: **NIL**

**L-T-P-C**  
**0- 0-3-2**

### **Course Objective**

To learn basic analytical techniques useful for engineering applications, applications of Spectroscopic measurements

### **List of Experiments**

- 1) Determination of alkalinity in a given water sample.
- 2) Determination of available chlorine in the given sample of bleaching powder.
- 3) Alkaline Hydrolysis of Benzamide to Benzoic Acid
- 4) Estimation of Fe(II) in Mohr's salt using standard  $K_2Cr_2O_7$  solution.
- 5) Standardization of  $KMnO_4$  by oxalic acid.
- 6) Estimation of Fe(II) in Mohr's salt using standard  $KMnO_4$  solution.
- 7) Conductometric titration of an unknown acid solution using a standard base solution.
- 8) Determination of total hardness of water
- 9) Estimation of sodium carbonate and sodium bicarbonate in a given mixture.
- 10) Calculation of Viscosity coefficient of sucrose using Ostwald's Viscometer
- 11) Standardization of  $Na_2S_2O_3$  solution with standard  $K_2Cr_2O_7$ .

### **Text Books/ Reference Books**

- 1) Vogel's Quantitative Chemical Analysis (6th Edition) Prentice Hall
- 2) Practical Chemistry by R.C. Bhattacharya

Course Title: Engineering Graphics  
**Course Code: ME11202/ME12202**  
**Pre-requisite: Nil**

L-T-P-C  
0-0-3-2

### **Course Objective**

This course is designed to introduce the students to the “universal language of Engineers” for effective communication through drafting exercises of various geometries. To learn the technical drawing is an important part of the engineering profession. The objective of the course is to teach students to communicate using graphic techniques. To create awareness and emphasize the need for Engineering Graphics in all the branches of engineering. To follow basic drawing standards and conventions and to develop skills in three-dimensional visualization of engineering component. To graphically construct and understand the importance of mathematical curves in Engineering applications by solving specific geometrical problems in plane geometry involving lines, plane figures and engineering Curves.

### **Course Content**

**Introduction:** Overview of the course, Examination and Evaluation patterns.

**Lines Lettering and Dimensioning:** Types of lines, Lettering, Dimensioning, Geometrical Constructions, Polygons, Scales, and Curves.

**Orthographic projection:** Principles of Orthographic Projection, Projections of Points, Straight Lines and traces, Projections of Laminas, Projections of Solids.

**Development of Surfaces:** Draw the development of surfaces for Prisms, Cylinders, Pyramid and Cones.

**Section of Solids:** Sectional planes, Sectional views - Prism, pyramid, cylinder and cone, true shape of the section. Development of truncated objects.

**Isometric views:** Isometric axis, Isometric Planes, Isometric View, Isometric projection

### **Text /Reference Books**

Course Title: **Language Laboratory I**

**L-T-P-C**

Course Code: **HS11201**

**0-0-2-1**

Pre-requisite: **Nil**

### **Course Objective**

The prime objective of the course is to implement result-oriented learning that not only aids in language learning, but also enhances students' overall personality through advanced courses in grooming and personality development.

### **Course Content**

#### **MODULE I**

##### ***The sounds of English***

- Practicing correct pronunciation through IPA (International Phonetic Alphabet), Stress, Intonation, Rhythm, and Speech Elocution.
- Vocabulary Building.
- Exercises:
- Online Format: pre-designed to focus on development in vocabulary and other communication skills.
- Offline Format: comprises group discussions, Story Writing, and other activities for communication building)

#### **MODULE II**

##### **Communication Skills**

- Practicing situational conversation
- Developing Reading Skills through lectures and monologue
- Exercises:
- Online Format: pre-designed to focus on development in vocabulary and other communications skill.
- Offline Format: comprises debates, Reading Practices and other activities for communication building)

### **Text/ Reference Books**

1. **Lewis, Norman.** *Word Power Made Easy (Latest Edition, 2020)*. Goyal Saab Publications
2. **Philip, Carr.** *English Phonetics and Phonology: An Introduction (2019)*. Wiley-Blackwell

# **Semester II**

Course Title: **Mathematics -II**

L-T-P-C

Course Code: **MA12101**

3-1-0-4

Pre-requisite: **Functions, integration, basic of vectors, limit, continuity & differentiability.**

### **Course Objective**

It will help to understand the electrical circuit analysis, conduction of heat in bodies, fluid flow in mechanics. Also helps to measure the degree of certainty/uncertainty of happening/non happening of event and analyze the distribution of continuous and discrete data. To be able to analyze the nature of functions and sequence & series of any data.

### **Course Content**

#### **MODULE I (13Hours) Laplace and Fourier Transform**

Laplace and inverse Laplace Transform, Existence of Laplace Transform, Linear property, Convolution Theorem, Solution of ordinary differential equation by Laplace Transform.

Fourier series, Fourier transforms, properties of Fourier Transform, sine and cosine transforms Inverse Fourier Transform, Z-transform.

#### **MODULE II (8 Hours) Vector Calculus**

Vector Calculus: Scalar and vector fields, level surfaces, Directional derivative, Gradient, Divergence, Curl, Laplacian, irrotational, solenoidal vectors and scalar potential, line, surface and volume integrals, Green's, Stokes and Gauss divergence theorem (statement only).

#### **MODULE III (10 Hours) Probability**

Random experiments, sample space, events, probability and conditional probability, Baye's theorem, Probability space, random variables, probability distribution and density functions, Expectation (mean and variance). Discrete distributions: Binomial and Poisson distributions Continuous distributions: normal distribution.

#### **MODULE IV (9 Hours) Single variable calculus**

Rolle's Theorem, Mean Value Theorem, Maxima and Minima, Sequences, Limits of a sequence and its properties, Series of positive terms, Necessary condition for convergence, Comparison test, D Alembert's ratio test, Cauchy's root test, Taylor Series.

Pre-requisite: **Nil**

L-T-P-C  
3-0-0-3

### **Course objectives**

The objective of the course in Electromagnetic Engineering is to provide students with a comprehensive understanding of electrostatics, magnetostatics, wave optics, lasers, and an overview of quantum computation. Through the course, students will develop a strong foundation in the principles and applications of electromagnetism, including concepts such as Gauss's law, Ampere's law, interference, diffraction, laser properties, and quantum information processing. The course aims to equip students with the knowledge and skills necessary to analyze and solve engineering problems related to electromagnetic phenomena, as well as prepare them for further studies or research in the field of electromagnetic engineering and related disciplines.

### **Course Content**

**Electrostatics:** Gauss's law and its applications, Divergence and Curl of Electrostatic fields, Electrostatic Potential, Boundary conditions, Work and Energy, Conductors, Capacitors, Laplace's equation, Dielectrics, Polarization, Bound Charges, Electric displacement, Energy in dielectrics, Forces on dielectrics. [10L]

**Magnetostatics:** Lorentz force, Biot-Savart and Ampere's laws and their applications, Divergence and Curl of Magnetostatic fields, Magnetic vector potential, Force and torque on a magnetic dipole, Magnetic materials, Magnetization, Bound currents. Maxwell's equations, Continuity Equation, Poynting Theorem, Wave solution of Maxwell Equations. [12L]

**Wave optics:** Interference: interference of light, interference in thin film (parallel and wedge-shaped film), Newton's rings. Michelson interferometer. Diffraction: Introduction to diffraction, single slit and double slit diffraction. Polarization: Introduction to polarization, types of polarization, production of plane polarised light- polarization by reflection, scattering and double reflection. [12 L]

**Laser:** Properties of laser beams: monochromaticity, coherence, directionality and brightness. working principle of LASER, amplification of light by population inversion, different types of lasers: gas lasers (He-Ne), solid- state lasers (ruby). [4L]

**Overview of Quantum Computation:** History of quantum computation, recent developments and future directions, Quantum bits, Quantum parallelism, practical quantum information processing. [4L]

### **Text /Reference books**

- 1) Introduction to Electrodynamics by D. J. Griffiths, Pearson.
- 2) Elements of Electromagnetics by M. N. O. Sadiku, and S.V. Kulkarni, Oxford University Press.
- 3) Optics by AjoyGhatak, McGraw-Hill.
- 4) Quantum Computation and Quantum Information by M. A. Nielsen and I. L. Chuang, CambridgeUniversity Press.
- 5) Introduction to Quantum Mechanics by D. J. Griffiths and D. F. Schroeter, Cambridge University Press.
- 6) Engineering Physics by H.K.Malik and A.K.Singh, McGraw-Hill.

**Course Title: Engineering Mechanics**  
**Course Code: ME12101**  
**Pre-requisite: Nil**

L-T-P-C  
3-1-0-4

### **Course Objective**

To understand the basic principles of engineering mechanics with emphasis on their analysis and application to practical engineering problems. To be able to analyze planar and spatial systems to determine the forces in members of trusses, frames. To understand the concept of moment of inertia and apply them to engineering problems. To be able to apply fundamental ideas of kinematics and dynamics to the analysis of simple practical problems.

### **Course Content**

#### **MODULE I (16 Hours)**

**Introduction:** Concept of force, force system, Fundamental laws and principles, principle of transmissibility, particle, rigid body, accuracy limit and approximations.

**Coplanar Concurrent Force System:** Resultant of a force system, graphical principles parallelogram law, triangle law, polygon rule, analytical method, conditions of equilibrium, space diagram and free body diagrams, Lami's theorem.

**Coplanar Non-Concurrent Force System:** Moment of a force, Varignon's theorem, couple, properties of couples, resultant of non-concurrent force system, conditions of equilibrium, equilibrant, equilibrium of two-force system and three-force system, types of supports, types of loads.

**Concept of Friction:** Laws of dry friction, angle of friction, coefficient of friction, belt friction. Problems related to equilibrium of coplanar force system with friction, ladder problems, belt friction problems.

**Plane Truss:** Statically determinate trusses, analysis of a truss and frames- Method of joints, Method of section, Method of members.

#### **MODULE II (10 Hours)**

Centroids and Second Moment of Areas:

- (a) **Centroid:** Definition of centre of gravity, centroid of area, centroid of line, concept of line of symmetry, location of centroid by direct integration of rectangular, triangular, semi-circular and quarter circular areas, centroid of composite areas.
- (b) **Second Moment of Area:** Definition, parallel axis theorem, polar moment of area, radius of gyration, second moment of area by direct integration of a rectangular, triangular, circular, semi-circular and quarter-circular area. Second moment of composite area.

### **MODULE III (8 Hours)**

**Kinematics:** Definition of kinematics, kinetics, displacement, velocity, acceleration, relationship between them, problems involving variable acceleration, equations of motion under constant acceleration, motion under gravity, projectile motion.

**Application of Newton's Second Law:** Newton's second law, definition of unit force, problems of rectilinear motion, motion of connected bodies.

### **MODULE IV (8 Hours)**

**Application of Work-Energy Principle:** Definition of work, energy, power, efficiency, derivation of work-energy equation, problems of rectilinear motion, motion of connected bodies.

**Application of Impulse-Momentum Equation:** Definition of linear momentum, impulse, derivation of impulse-momentum equation, conservation of linear momentum, problems related to rectilinear motion, motion of connected bodies, conservation of momentum.

**Pre-requisite: Nil**

**L-T-P-C**  
**2-0-0-2**

## **Course Content**

### **MODULE 1 [12L]: Linear Data Structure**

Introduction of Data Structure; Need and Applications; Abstract Data Type; Dynamic Memory Allocation; Array; Linked List; Stack and Queues; Priority Queues - Implementation and Applications.

### **MODULE 2 [6L]: Sorting, Searching;**

Sorting techniques- need; Types of Sorting, selection sort, Quick Sort; Searching techniques: need; Linear Search, Binary Search; Implementation and Applications of all.

### **MODULE 3[6L]:**

Introduction to Logic: Propositional Logic, Predicate Logic.

### **MODULE 4[8L]: Computer Networks and Internet Basics**

Computer Networks and Internet, Categories of Networks: Wired, Wireless, Sensor, LAN, WAN, PAN; network topologies need, and type, network switching: Packet and Circuit Switching, Protocol Layers and their functions (example protocol on each layer), Application Layer Protocols, E-mail, FTP, WWW and HTTP. Introduction to Cyber Security and Forensics with needs.

### **MODULE 5[8L]:**

Introduction to Machine Learning, Artificial Intelligence and Fuzzy logic, Internet of Things, Natural Language Processing, Big Data, Mobile Computing, Cloud Computing.

## **Text /Reference Books**

- 4) Data Structures by Tanenbum
- 5) Data Communications and Networking by Forouzan

Course Title: **Principles of Electrical and Electronics Engineering**

L-T-P-C

Course Code: **EE12101**

**3-0-0-3**

Pre-requisite: **Nil**

### **Course Objective**

After completion of the course, students will be able to:

- Implement the knowledge of electrical circuits to solve different problems of the DC & AC circuits
- Demonstrate the connection & use of different measuring instruments.
- Explain the operation of transformers, electric generators & motors and discuss the importance & use of different special machines.
- Explain the operation of basic semiconductor devices, amplifier and its application in the digital communication systems.
- Recognize the necessity of sensors in different applications and explain the operation of some common type of sensors.

### **Course Content**

#### **MODULE I: Introduction to Electrical Circuits (12 Hours)**

Types of sources and elements, Kirchoff's Laws, Mesh and node analysis of DC networks; Single phase A.C. circuits – concept of phasor, impedance, admittance, conductance and susceptance; Active, reactive and apparent power in AC circuits, power factor, Three phase A.C. circuits - phase sequence, power in three phase system. Measurement of voltage, current, power and energy; Introduction to electrical energy generation from different resources, transmission, distribution and utilization.

#### **MODULE II: Introduction to Electrical Machines (10 Hours)**

Working principles of Transformer and its applications, working principle of DC Machines and its applications; working principle of single phase and three phase AC Machines and its applications; working principle and applications of Special machines such as Stepper motor, Universal Motor, BLDC motor, PMSM motor, SRM motor.

#### **MODULE III: Introduction to Electronics and its Applications (10 Hours)**

Basic principle and operation of semiconductor devices-diode, bipolar junction transistor, field effect transistors, Basic concepts of rectifiers, voltage regulators, amplifier and their applications; Introduction to logic gates.

#### **MODULE IV: Sensors (10 Hours)**

Applications of sensors - Inertial sensing, linear and rotary displacement sensors, acoustic and thermal sensing - ultrasonic sensor, infrared thermography, navigation sensors - GPS, motion capture systems, force and torque sensors, tactile and

pressure, gas sensors, potentiometer, optical encoder, photoelectric sensor, Hall effect sensor, inductive and capacitive proximity sensor, pressure sensor - piezoelectric sensor.

Course Title: **Human Values and Effective Communication**

L-T-P-C

Course Code: **HS12101**

**1-1-0-2**

Pre-requisite: Nil

### **Course Objective**

The primary objective aims to provide knowledge that roots an overall impact on the academic and professional excellence of the under graduate engineering students and that also adds value to their life in social circumstances.

### **Course Content**

#### **MODULE I (10 Hours)**

Human Values through Literature

*Source Material: Kanthapura* by Raja Rao

Value of self, and society, Culture – Indian and Western, Gender empowerment, Nationalism, Humanism, Professionalism, Honesty, Happiness, Integrity.

#### **MODULE II (10 Hours)**

##### **Communication**

Communication: definition, process of communication, types and forms of communication, barriers to communication, role, and importance in the corporate world.

#### **MODULE III (12 Hours)**

##### **Communication for practical purposes**

Developing reading, writing, listening, and speaking skills, Interview: definition, types, forms, plan, and preparation. Presentation: definition, types, and forms. Proposal: definition, types, and forms.

3. **Rao, Raja.** *Kanthapura.* Orient Paper Back, New Delhi, 1970.

Course Title: **Engineering Physics Laboratory**  
Course code: **PH11201 & PH12201**  
Pre-requisite: **Nil**

L-T-P-C  
0-0-2-1

### **Course objectives**

The course focuses on developing students' practical skills in experimental physics through a range of hands-on activities. Students will learn techniques such as determining semiconductor properties using the Four Probe Method, measuring the Numerical Aperture of optical fibers, studying magnetic field variations with current-carrying coils, calculating Hall Coefficient and carrier properties using the Hall Effect, determining lens curvature with Newton's Ring apparatus, measuring susceptibility of liquids/solutions with Quincke's Method, determining Planck's Constant using LEDs, measuring magnetoresistance of semiconductors, and determining light wavelength with a Michelson Interferometer. These experiments enhance students' understanding of fundamental concepts and foster proficiency in experimental physics.

### **Course Content**

- 1) Four Probe: This experiment involves using the Four Probe Method to determine the band gap energy and resistivity of semiconductors.
- 2) Fiber Optics: The objective is to measure the Numerical Aperture of an optical fiber.
- 3) Magnetic Field: This experiment has two parts - studying the variation of the magnetic field with distance along the axis of a circular current-carrying coil and calculating the coil's diameter, and exploring the superposition of magnetic fields from two coils at different distances.
- 4) Hall Effect: The goal is to calculate the Hall Coefficient, Carrier Density, and Carrier Mobility of sample material.
- 5) Newton's Ring: Using Newton's Ring apparatus, this experiment focuses on determining the radius of curvature of the lower surface of a plano-convex lens.
- 6) Quincke's Method: The objective is to measure the susceptibility of a liquid or a solution using Quincke's Method.
- 7) Planck's Constant: This experiment involves determining Planck's Constant using LEDs.
- 8) Magnetoresistance: The objective is to measure the magnetoresistance of semiconductors.
- 9) Michelson Interferometer: Using a Michelson Interferometer, the goal is to determine the wavelength of sodium light.
- 10) **Reference:** Experimental Manuals

**Course Title: Computing Laboratory**  
**Course Code: CS12201**  
**Pre-requisite: Nil**

**L-T-P-C**  
**0-0-4-2**

### **Course Content**

- 1) You are required to write the programs in c on the integer array for following operations
  - a) To insert the elements in the integer array and to display the number of negative elements of the array and also to display the prime elements of the array.
  - b) Write function that can find the largest element in the array. Array must be used as parameter.
  - c) Write a program that invokes the above function (b) to find the largest element and print it out.
  - d) Write function that can find the largest element in the integer array using pointer arithmetic.
  - e) Write a program that invokes the above (d) function to find the largest element and displays the result out.
- 2) You are required to write the program in C to:
  - a) Define a structure with two fields: width and height for rectangle. Input an array of rectangle, then display each area and perimeter of each rectangle in array.
  - b) Use the pointer to loop around the array for the same (a).
- 3) Write a program in c that receives a number n and return a pointer to the character string containing the name of the corresponding month.
- 4) You are required to define a structure named UP with the following three members:
  - A character array city[] to store names.
  - A long integer to store the population of the city.
  - A float member to store the literacy level.Then write a program to do the following:
  - a) To read the details of 5 cities randomly using an array variable.
  - b) To sort the list alphabetically.
  - c) To sort the list based on literacy level.
  - d) To sort the list based on population.
  - e) To display the sorted lists.
- 5) As you have studied structure and pointer in the last semester. You are required to write programs using structure containing a pointer member name to represent the information about a person.

- a) To read the information about a person and to print it on the screen.
  - b) To initialize data of several employees and print it in tabular format. Use the function `emp_print()` the data of a single employee.
  - c) To create and print a list of persons and their mobile number. Use nested structure and pointer members.
- 6) Write a program to implement a single link list to perform the following operations
    - a) Insertion at the beginning, at end and at any position of the list.
    - b) Deletion at the beginning, at end and at any position of the list.
    - c) Traverse the single link list
  - 7) Write a program to implement stack using static and dynamic representation and perform Insertion and Deletion.
  - 8) Write a program to implement queue using static and dynamic representation and perform Insertion and Deletion.
  - 9) Write a program to implement binary tree using link list.
  - 10) Write a program to implement linear and binary search.
  - 11) Write a program to sort a list of elements using bubble sort and selection sort

**Course Title: Workshop Practice**  
**Course Code: ME11201/ME12201**  
**Pre-requisite: Nil**

L-T-P-C  
0-0-3-2

### **Course Objective**

To impart knowledge and skill to use tools, machines, equipment and measuring instruments. The students will be able to understand different tools and equipment for workshop practice and safety precautions in the workshop. Students will acquire skills for the preparation of different carpentry/fitting/welding models as well as application-oriented tasks.

### **Course Content**

**Introduction to Mechanical Workshop:** Study of Workshop rules and safety considerations in different machinery usages and machine tools.

**Carpentry:** Study of tools and joints – planning, chiseling, marking and sawing practice, onetypical joint- Tee halving/Mortise and Tenon/ Dovetail

**Fitting:** Study of tools- chipping, filing, cutting, drilling, tapping and threading about male and female joints, stepped joints- one simple exercise of single V joint for welding exercise.

**Sheet Metal Work:** Study of tools, selection of different gauge sheets, types of joints, fabrication of a tray or a funnel

**Lathe Exercise:** Study of the basic lathe operations, a simple step turning exercise.

**Welding Practice:** Study and practice of manual metal arc welding (MMAW). Exercise of Butt joint/Lap Joint/Corner Joint/Tee Joints.

- 3) Miami, Welding Handbook, American Welding Society, 2000.

**Course Title: Electrical and Electronics Engineering laboratory**

**L-T-P-C**

**Course Code: EE12201**

**0-0-2-1**

**Pre-requisite: Nil**

### **Course Objective**

After performing the experiments, students will be able to:

Acquire knowledge on different electrical, electronic components, motors, sensors and measuring devices used in different home appliances and also in industrial applications. Students will also get adequate knowledge on electrical wiring and also get an overview of distribution system

### **Course Content**

#### **1. Familiarization with Electrical and Electronic components**

- d. Different types of cables/wires and switches and usage of those
- e. Wiring tools, lighting and wiring accessories, various types of wiring
- f. Wiring of a multi-pin extension board

#### **2. Assembling of a given Electrical/Electronic circuit (e.g. power supply)**

- c. On a bread board
- d. Soldering on PCB;

#### **3. Wiring for light (e.g., fluorescent lamp/CFL/LED light) or Fan**

- d. controlled by one switch
- e. controlled by two SPDT switch
- f. controlled by one switch from board with MCB

#### **4. Study of Electric shock phenomenon and preventions**

- c. Earthing and its construction
- d. Usage of different types of protection devices such as fuses, MCB, ELCB etc.

#### **5. Study of measuring devices for current, voltage, power and energy measurement,**

- c. Ammeter, voltmeter, wattmeter and multi-meter
- d. Single phase and three phase energy meters

#### **6. Study of uncontrolled, semi-controlled and fully controlled devices and their Characteristics**

#### **7. Study of logic gates such as AND, OR, NOR, NAND etc.**

#### **8. Hands on with Microcontroller and IoT devices e.g., PIC, ATmega, Arduino, Raspberry Pi and peripheral components**

#### **9. Hands on with sensors and development of applications as a short-term project e.g.**

#### **10. Hands on with Ultrasonic sensors; applications - distance measurement, water level Measurement**

#### **11. Hands on with Infrared PIR motion sensor; applications - thermal imaging, military Applications**

#### **12. Field visit for the demonstration of distribution transformer, DG, electrical distribution panel, earthing, lightning arrester etc.**

Course Title: **Language Laboratory II**

L-T-P-C

Course Code: **HS12201**

**0-0-2-1**

Pre-requisite: **Nil**

### **Course Objective**

The prime objective of the course is to implement result-oriented learning that not only aids in language learning, but also enhances students' overall personality through advanced courses in grooming and personality development.

### **Course Content**

#### **MODULE I**

##### ***Writing Skill***

Letter Writing

Skills for Professional Conversations

Exercises:

*Online Format:* pre-designed to focus on development in vocabulary and other communication skills.

*Offline Format:* comprises extempore, and other activities for communication building.

#### **MODULE II**

Designing Curriculum Vitae and Cover letter

Learning public speaking and body language through role play

Exercises:

*Online Format:* pre-designed to focus on development in vocabulary and other communications skills.

*Offline Format:* comprises role play to learn language skills in professional scenario, public speaking, and other activities for communication building.
